## Emergency Pumping Operations, 07<sup>th</sup> May 2015

This morning, at approximately 9am, a blockage occurred in the local Thames Water sewer network along John Islip Street. Upon inspection, the cause of the blockage was found to be fatty deposits that had built up over a prolonged period of time.

The result of this network failure is that a large volume of sewage from the local area has ended up in the basement of Abell House.

Unfortunately there will be on-going emergency operations happening this evening to remedy the situation, both involving the flushing of the drain and the cleaning up of raw sewage from in and around the site. For obvious health and safety reasons this must be effected immediately. The work is likely to involve pumping operations into a tanker located in the John Islip Street pit-lane.

Please accept our apologies for any disturbance this may cause you. We will try to keep any noise levels to a minimum and trust that you will appreciate the urgent and unavoidable nature of these works.

Should you have any further queries regarding the above please do not hesitate to contact David MacFarlane of SP Broadway on 0203 405 1400 / [david@spbroadway.com](mailto:david@spbroadway.com).
